TECTONOPHYSICS

Contents Volume 254

Research Papers

Betic-Rif orogeny: subduction of Mesozoic Tethys lithosphere under eastward drifting Iberia, slab detachment shortly before 22 Ma, and subsequent uplift and extensional tectonics
H.P. Zeck 1

Cenozoic dextral transpression and basin development at the southern edge of the Puna Plateau, northwestern Argentina
M. de Urreiztieta, D. Gapais, C. Le Corre, P.R. Cobbold and E. Rossello 17

Advection of fluids at the front of the Sicilian Neogene subduction complex
C. Larroque, N. Guilhaumou, J.-F. Stephan and F. Roure 41

Gravity modeling of a volcanically active site on the East Pacific Rise axis
J.M. Stevenson and J.A. Hildebrand 57

Modes of continental lithospheric extension: experimental verification of strain localization processes
V. Benes and P. Davy 69

Gravity and tectonic model across the Sulaiman fold belt and the Chaman fault zone in western Pakistan and eastern Afghanistan
I.A.K. Jadoon and A. Khurshid 89

Structural evolution of the northern end of the Oman Ophiolite and enclosed granulites
E. Gnos and A. Nicolas 111

Neotectonic activity in Caesarea, the Mediterranean coast of central Israel
Y. Mart and I. Perecman 139

Subject Index Volumes 201–250 155
